Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-20 (Canceled)

- 21. (Previously Presented) A method for preparing a stabilized multi-component vaccine, the method comprising mixing at least:
 - a) pertussis toxoid and filamentous hemagglutinin in purified form,
 - b) tetanus toxoid,
 - c) diphtheria toxoid,
 - d) inactivated polio virus,
 - e) a conjugate of a carrier molecule selected from tetanus toxoid and diphtheria toxoid and a capsular polysaccharide of *Haemophilus influenzae* type B, and
 - f) an aluminum salt.

wherein tetanus toxoid and diphtheria toxoid are adsorbed onto the aluminum salt before being mixed with the other components and the conjugate is prepared in a phosphate buffer solution before being mixed with the other components.

- 22. (Previously Presented) The method according to claim 21, wherein pertussis toxoid and filamentous hemagglutinin in purified form are adsorbed onto an aluminum salt before being mixed with the other components.
- 23. (Previously Presented) The method according to claim 21, wherein inactivated polio virus is mixed with the other components without being adsorbed onto an aluminum salt.
- 24. (Previously Presented) The method according to claim 21, wherein the aluminum salt is selected from a group consisting of aluminum hydroxide and aluminum phosphate.
- 25. (Previously Presented) The method according to claim 21, further comprising adding hepatitis B surface antigen adsorbed onto an aluminum salt before being mixed with the other components.
- 26. (Previously Presented) The method according to claim 21, wherein mixing is conducted in the following order:
 - a) adsorbing tetanus toxoid and diphtheria onto aluminum hydroxide,
 - b) adsorbing pertussis toxoid and filamentous hemagglutinin in purified form onto an aluminum salt,

- c) mixing the components obtained in a) with those obtained in b),
- d) adding inactivated polio virus,
- e) adding a phosphate buffer solution of a conjugate of a carrier molecule selected from tetanus toxoid and diphtheria toxoid and a capsular polysaccharide of Haemophilus influenzae type B.
- 27. (Previously Presented) A method according to claim 25 wherein mixing is conducted in the following order:
 - a) adsorbing tetanus toxoid and diphtheria onto aluminum hydroxide,
 - b) adsorbing pertussis toxoid and filamentous hemagglutinin in purified form onto an aluminum salt,
 - c) mixing the components obtained in a) with those obtained in b),
 - d) adding inactivated poliovirus after c),
 - e) adding hepatitis B surface antigen previously adsorbed onto an aluminum salt after d),
 - f) adding a phosphate buffer solution of a conjugate of a carrier molecule selected from tetanus toxoid and diphtheria toxoid and a capsular polysaccharide of *Haemophilus* influenzae type B after e).
- 28. (Cancelled)
- 29. (Previously Presented) The method according to claim 25, wherein hepatitis B surface antigen previously adsorbed onto aluminum salt is added separately from the other components within a dual chamber syringe.
- 30. (Previously Presented) A multi-component vaccine obtained by the method according to claim 21.
- 31. (Previously Presented) The multi-component vaccine according to claim 30, wherein the amounts of pertussis toxoid and filamentous hemagglutinin are between 5 and 30 µg in a single dose of said multi-component vaccine.
- 32. (Previously Presented) The multi-component vaccine according to claim 30, wherein the amounts of diphtheria toxoid and tetanus toxoid are between 5 and 30 LF in a single dose of sald multi-component vaccine.
- 33. (Previously Presented) The multi-component vaccine according to claim 30 wherein the amounts of the different polioviruses are
 - a) between 20 and 50 D antigen units of poliovirus type 1,

- b) between 4 and 10 D antigen units of poliovirus type 2, and
- c) between 8 and 40 antigen units of poliovirus type 3,

in a single dose of said multi-component vaccine.

34. (Previously Presented) A multi-component vaccine obtained by the method of claim 27, wherein the composition of said vaccine comprises per 0.5 ml dose:

3129130002

- a) 25 µg pertussis toxoid;
- b) 25 µg filamentous hemagglutinin;
- c) 30 LF diphtheria toxoid;
- d) 10 Lf tetanus toxoid;
- e) 40 D antigen units poliovirus type 1;
- f) 8 D antigen units poliovirus type 2;
- g) 32 D antigen units poliovirus type 3;
- h) 10 µg Haemophilus influenzae type B polysaccharide covalently bound to 20 µg tetanus toxoid: and
- 5 µg hepatitis B surface antigen.
- 35. (Previously Presented) The multi-component vaccine according to claim 30, wherein the composition of said vaccine comprises per 0.5 ml dose:
 - a) 25 µg pertussis toxoid:
 - b) 25 µg filamentous hemagglutinin;
 - c) 30 LF diphtheria toxoid:
 - d) 10 Lf tetanus toxoid;
 - e) 40 D antigen units poliovirus type 1:
 - f) 8 D antigen units poliovirus type 2:
 - g) 32 D antigen units poliovirus type 3;
 - h) 10 µg Haemophilus influenzae type B polysaccharide covalently bound to 20 µg tetanus toxoid:
 - i) 5 µg hepatitis B surface antigen;
 - j) 20 µMoles phosphates;
 - k) 5 µMoles carbonates;
 - i) 0.125 ml of 50 mM tris buffer; and
 - m) 0.356 mg aluminum salt.

- 36. (Currently Amended) A method for conferring protection in a host against disease caused by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, Poliovirus and Hepatitis B virus comprising administering an effective amount of a multi-component vaccine obtained by the method of claim 27.
- 37. (Currently Amended) A method of immunizing a human host against disease caused by infection by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, Poliovirus, and/or Hepatitis B virus, which method comprises administering to the host an effective amount of a multi-component vaccine obtained by the method of claim 27.
- 38. (Previously Presented) The method of claim 36 wherein the host is an infant.
- 39. (New) A method for conferring protection in a host against disease caused by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, and Poliovirus comprising administering an effective amount of a multi-component vaccine obtained by the method of claim 26.
- 40. (New) A method of immunizing a human host against disease caused by infection by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, and Poliovirus, which method comprises administering to the host an effective amount of a multi-component vaccine obtained by the method of claim 26.
- 41. (New) The method of claim 39 wherein the host is an infant.
- 42. (New) A method for conferring protection in a host against disease caused by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, and Poliovirus comprising administering an effective amount of a multi-component vaccine obtained by the method of claim 21.
- 43. (New) A method of immunizing a human host against disease caused by infection by Bordetella pertussis, Clostridium tetanii, Corynebacterium diphtheriae, Haemophilus influenzae, and Poliovirus, which method comprises administering to the host an effective amount of a multi-component vaccine obtained by the method of claim 21.
- 44. (New) The method of claim 45 wherein the host is an infant.
